Forecast for Monday 07 Dec 2020

Weather: Mist and fog shrouding most slopes above 500m through morning but this will thin and break to leave some long spells of sunshine from late morning, though cloud take longer to clear in the east. Cloud will thicken from the west towards midnight bringing a few snow showers.

Chance of cloud free mountain/hill tops above 600m: 10% rising 70% through morning as cloud above 500m lifts and breaks.

Visibility: Fog conditions on the hills initially but this will gradually lift through morning to leave good views.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

A cold day. Cloud across the hills may be slower to clear through morning than suggested.

Recent rainfall: measured at Neuadd: altitude 353m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
15:00 on Sun 06 Dec 2020	0mm	7.4mm	7.6mm

Forecast for Tuesday 08 Dec 2020

Weather: Quite a contrast in conditions compared to Monday, with spells of rain and summit sleet spreading from the northwest all day along with fresh northwest winds. Summit temperatures just above freezing and wet conditions will lead to marked windchill.

Maximum wind: West or northwest 15-25mph gusting up to 35mph.

Chance of cloud free mountain/hill tops above 600m: 10% as cloud quickly becomes extensive above 400-500m across all parts. Some limited shelter across southeast facing slopes.

Visibility: Very limited at height in cloud and hazy at low levels given frequency of rain.

Temperature: **Valleys:** 3 rising 6C.
At 600m: 1 or 2C.
Freezing level: Above summits.
